## RESEARCH INTERESTS

---

My interests lie in **mathematics and computing**, particularly **number theory** and **symbolic algebra**. Very recent interests include homotopy continuation and symbolic regression. Generally, I study **dessins d'enfants**, and my work is often predicated on the computation of **Belyi maps** from permutation representations and passports. I often write software for **high-performance, parallel, and distributed computing** and have reasonably extensive experience with a broad range of **modern machine learning** techniques.
